Slope Requirements

GCP’s underlayments (Grace Ice & Water Shield®, Grace Ice & Water Shield® HT, Grace Ultra™, Grace Select™, GCP granular underlayments, Roof Detail Membrane, Tri-Flex XT® and Tri-Flex15®) are intended for use on sloped roofs and are not intended to be used as waterproofing on flat roofs.

A good rule of thumb is that the product is appropriate at whatever slope is normally acceptable for the specific sloped roof covering. For example, if the roof covering on a specific project is designed for slopes of 3 inches in 12 inches (7 cm in 30 cm) or higher, then GCP’s underlayments under that roof covering are also appropriate at slopes of 3 inches in 12 inches (7 cm in 30 cm) or higher.

GCP’s underlayments should not generally be used at slopes less than 2 inches in 12 inches (5 cm in 30 cm). Refer to product data sheets for further details.
